## Removable Partial Denture Instructions

Congratulations on your partial! It was made specifically for you by our lab right here in West Springfield. Care for your partial should be very easy.

- Brush and floss your natural teeth and gums without your partial in your mouth.
- Clean the appliance daily. Rinse under warm running water for approximately 30 seconds to remove any food particles.
- Brush appliance with a soft denture brush using water only. Rinse again.
- DO NOT use bleach, toothpaste, or similar cleaning products, these may scratch or discolor the surface of the appliance.
- You may place appliance in a denture cleaner for 15 minutes daily, as needed. We recommend TCS Concentrated Dental Appliance Cleaner (available on Amazon.com).
- The gum areas covered by your partial need rest, and you should leave your partial out of your mouth for several consecutive hours daily. It is therefore highly recommended NOT to sleep with your partial in your mouth.
- **MOST IMPORTANTLY, keep appliance in water or a denture solution when not wearing it. If the acrylic material dries out, it can warp and cause the partial not to fit properly.**
